

An app that helps patients scan hand written prescriptions and then manage their medications.

Look for papers that measure:

Accuracy rate

Method

Regular expression based pipeline

Deep learning technique to identify medication name

CHECK: What type of app they've developed, which nlp method, github link

Upload everything on Zotero and add a little description about the type of app, NLP methods, etc.

Python paper for NNs for images of hand writing

Practice extractions from images
